Unreal Engine 5 Skills - 3D Asset Integration, Level Design, Blueprint scripting, Material and Shader Creation, Lighting and Rendering, Animation Integration, Physics and Simulations and User Interface Design.

Driving licence

B

Further information about my work experiences abroad

In Spain

In addition to learning Spanish, I worked alongside my supervisor, who taught me how to manage the network and update the server-side communication system at the Renfe railway travel agency. I also managed and set up their automation systems for various internal robotic components.

In Italy

At **Colico's Town Hall**, I organized, updated, and populated their website with current news for the city's citizens. Additionally, I digitized their information systems.

At **Iperal Fuentes**, I worked in sales, interacting with clients and selling smartphones, computers, and household appliances. Additionally, I was responsible for product accounting and warehouse management.

At **AFAST** (Accenture Financial Advanced Solution & Technology), I took on various roles and responsibilities, including System Administrator for the Linux environment. I contributed to the J2C project, which involved migrating branch desktops to a cloud environment, where I served as a Data Analyst, Cloud Migration Engineer, and coordinator of team positions and activities.
